

RF Remote Deadbolt Locks-Radio Frequency Lock RF-01

Keyless Radio Frequency RF Remote Control Electronic Deadbolt Locks Replace your door lock with an inexpensive wireless radio frequency (RF) remote electronic digital door lock. Wireless radio frequency (RF) remote keyless door lock is easy to install and even easier to program. If you are replacing an existing typical deadbolt with a 2-1/8 inch mounting hole, it's even easier. The keyless door lock comes with Anti-Theft Rolling Code Security to ensure that your security can adapt and stay effective 24 hours a day, 7 days a week. Push the remote control and the deadbolt retracts. Since the keyless door lock is a deadbolt and not a latch, you will need to lock it manually from the outside by pressing a button or from the inside by turning a small turn piece. It can NOT lock automatically like a latch lock.

Security:

- Anti-Theft Rolling Code Security Technology.
- Module will not lose programming code during batteries change or power failure.
- Each lock recognizes up to 15 different remote control codes.
- Each remote transmitter is programmable to open unlimited doors.
