

PNT4000 Radio Freq. Deabolt & Latch

The PNT 4000 provides freedom and independence for those less mobile, and convenience when hands are full. The PNT4000 Door Opener allows the unlocking, unlatching, opening then closing, latching and locking of your door using a remote control. Remote: The remote operates similar to a garage remote. With a press of the remote control unlock button when the door is closed, the door will unlock the deadbolt, unlatch, and then open the door. Press the unlock button when the door is open and the door will close, latch and then the deadbolt will lock. If the remote is pressed during the closing or opening cycle the unit will disengage and the door will be free flowing and in manual mode. The door will operate as a normal door if the remote is not activated; therefore people can come in an out using a key and manually opening and closing the door. The remote can be used from the inside or outside of the home and you can answer the door from virtually any room in your home. A pleasant audible tone will tell you if the system is in operation. The closed button will engage the deadbolt and lock the door. Door Opener and Closer: The PNT Door Opener plugs into any electrical wall receptacle. You can enter and exit manually with a key and hand opening or closing.

Security: The PNT Door Opener is designed to close and lock using a deadbolt every time the door is opened. If your doorknob has a locking mechanism this will give added security. Additional deadbolts can be added. All the user has to do is press the remote, then watch the door go through its cycle and lock. Key Benefits: Ideal for those who are in scooters, wheelchairs or walkers as it allows them to enter and exit the door by just touching a button. Allows answering of the door from the comfort of your couch or bed. Improves the image of the home and provides a sense of modernization and practical convenience. Eliminates damage to the walls and doors if in walker, scooter or wheelchair. Personal assistance is no longer needed to enter or exit doors. Easily transferable to another door if no longer required. Affordable and easy to install Key Features: Safety: If the PNT Door Opener meets any resistance during the open/closed cycle, the motor will immediately disengage preventing any harm to the person entering or exiting. Product Life: Factory tests show that the PNT Door Opener will last over 25,000 cycles. Microprocessor: The PNT Door Opener is programmed so the units timing and speed is safe and operate efficiently. Timing control slows the motor just prior to closing and opening to facilitate a smooth operation. Colours: The PNT Door Opener is available in white, bronze and satin finishes. Deadbolt: The deadbolt uses Radio Frequency and included these key features: Anti-Scan code hopping technology. Lock and unlock the door from any directions within the RF range (up to 30 ft if there is no obstacle between remote and lock). Single push button programming. Adjustable latch: 2 3/8" or 2 3/4" backset. Use 4 AA batteries (not included), low battery consumption. Audible tones for lock, unlock, jam and low batteries. 1 remote transmitter and additional keys for conventional operation included. Latching: When activated by the remote the electric strike release disengages the latch from the strike plate. Video Price: \$1198.00 USD
